DIRECTIONS FOR USE

We recommend this package of **ferti•lome® Winterizer For Established Lawns** because fall feeding can help prevent winter damage to lawn grasses, and you do not lose as many valuable trees, shrubs, ornamentals or evergreens due to hazards of a cold winter.

1. WHAT IS THIS PACKAGE FOR?

This product is especially formulated to help your lawn, trees, shrubs, ornamentals and evergreens in proper condition to withstand the hazards of a cold winter because it helps build root systems. Root growth goes on throughout the fall and winter. Recommended for fall and winter use.

2. HOW DO YOU USE IT?

ESTABLISHED LAWNS:

Apply **ferti•lome® Winterizer For Established Lawns** using the spreader settings in the table below. Water thoroughly after application.

Do not apply near water, storm drains or drainage ditches. Do not apply if heavy rain is expected. Apply this product only to your lawn/ garden, and sweep any product that lands on the sidewalk, driveway or street back into your lawn/ garden.

SPREADER GUIDE

ONE BAG WILL COVER UP TO 10,000 SQ. FT.

These settings can be used only as a guide, they are not absolute. The speed at which the applicator walks, spreader condition and texture of the turf will affect the rate of application. If product remains in spreader after application of recommended square foot coverage, spread remainder over same area at a right angle to original direction. The maximum number of broadcast applications per treatment site is 2 per year. Application rate is 4.0 lbs. per 1,000 sq. ft.

NOTE: The spreader settings listed below are approximate. The speed at which you walk and the working condition of the spreader will affect the rate of application.

Spreader	Spreader Settings 4Lbs. of product per 1,000 sq. ft.
Scotts®/Republic Accugreen (Drop)	4 1/4
Scotts®/Republic Speedy Green (Broadcast)	3 3/4
ferti•lome®/Earthway Ev-N-Spred (Broadcast)	14

TREES: It is very important to fertilize your trees. Well-fed trees not only grow faster and develop into better shade trees, but well-fed trees normally are not damaged as extensively by tree borers and other insects as poorly-fed trees. Fertilize your trees by applying 1 lb. of **ferti•lome® Winterizer For Established Lawns** for each inch of trunk diameter. Apply to ground out under the widest spread of branches. Water thoroughly.

SHRUBS, ORNAMENTALS, EVERGREENS: Apply **ferti•lome® Winterizer For Established Lawns** by sprinkling a light coating on ground out under the widest spread of branches at the rate of 1 cup to 3 ft. plant; larger or smaller plants should be fertilized in proportion to that.

ROSES, AZALEAS, CAMELLIAS AND GARDENIAS: **ferti•lome® Winterizer For Established Lawns** can be used for fall feeding of Roses, Azaleas, Camellias and Gardenias by following the directions listed above for SHRUBS. Water well.

CAUTION: DO NOT OVER APPLY NEAR SHRUBS AND TREE TRUNKS.

NOTE: Not recommended for container grown plants!

3. HERE ARE THE RESULTS YOU MAY EXPECT!

When used as directed, **ferti•lome® Winterizer For Established Lawns** aids in increasing winter hardiness, helps build better root systems and promotes sturdiness in plants weakened by too rapid growth.
